ACC Biotech Video
"Biotechnology Making the Connection"

This video has been specifically designed for use by teachers and counselors to help students better understand the career opportunities available in biotechnology. It comes with a discussion guide as a companion to the video to assist educators with classroom activities. As educators, we want to promote interest in these fields both because of possible career choices but also because they have an important impact on students’ lives. The products of biomedical research hold the key to improved life expectancy, reduced human suffering and cures for many diseases. Understanding new developments could even help determine our very survival.

Following is a link to preview the video; you will need at least Real Player 8 to view it. http://vids.austin.cc.tx.us:8080/ramgen/etv/biotechb.rm
