

Recommended DEV C++ Configuration Options

Select **Tools** then **Editor Options**

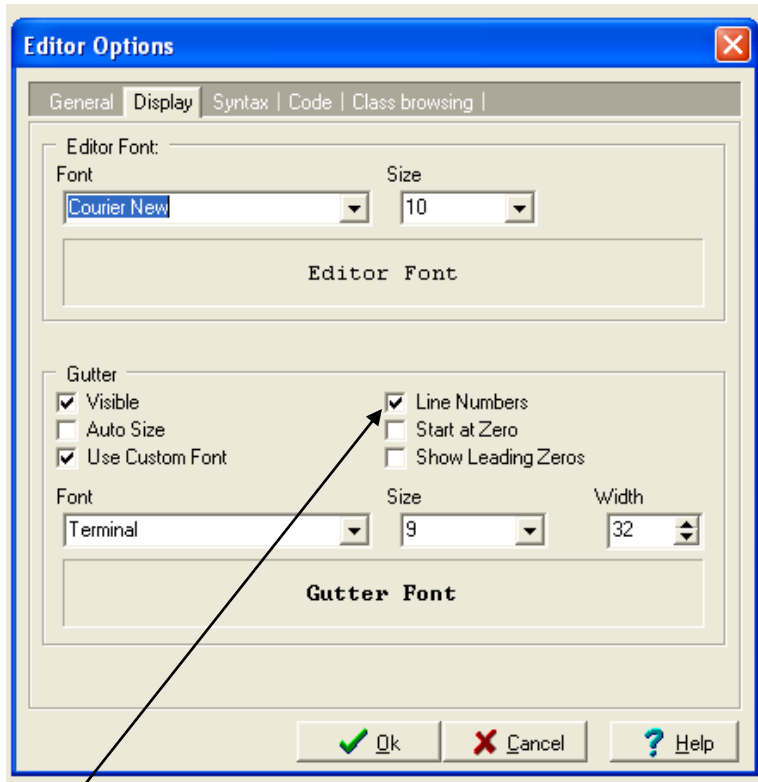

UNCHECK "Smart Tabs" – this will provide more standard indentation when typing nested code

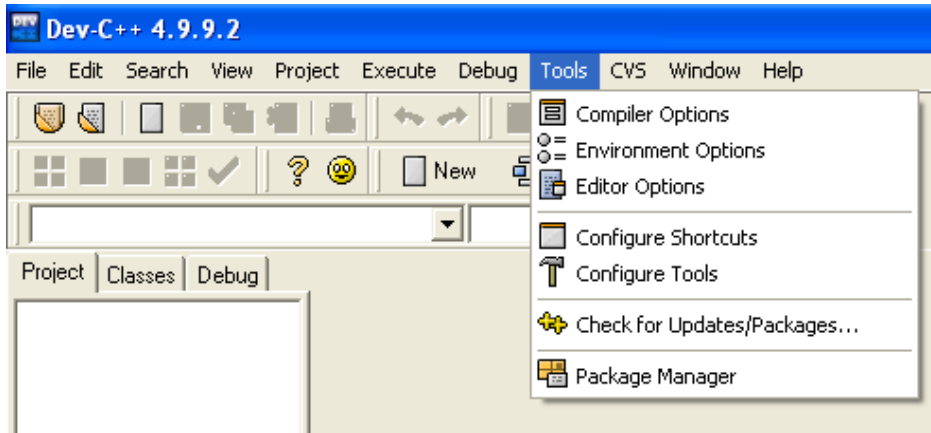

CHECK "Highlight matching braces/parentheses", then click **OK** – this will assist in finding problems with unmatched braces / parentheses

SELECT the “Display” Tab

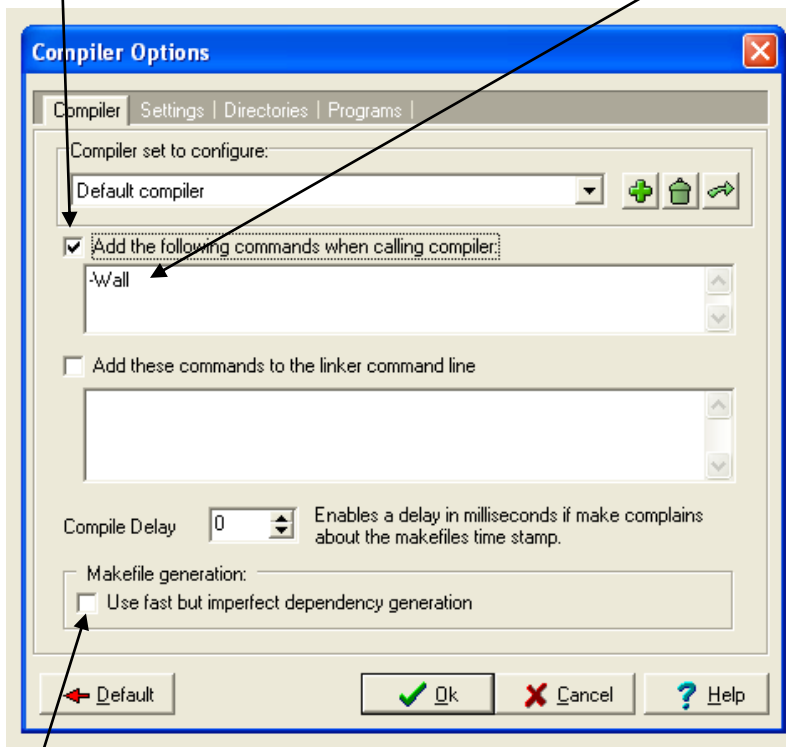

CHECK “Line Numbers”, then click **OK** – This will make it easier to relate Dev C++ compiler error messages to the specific line number in the listing

Select **Tools** then **Compiler Options**

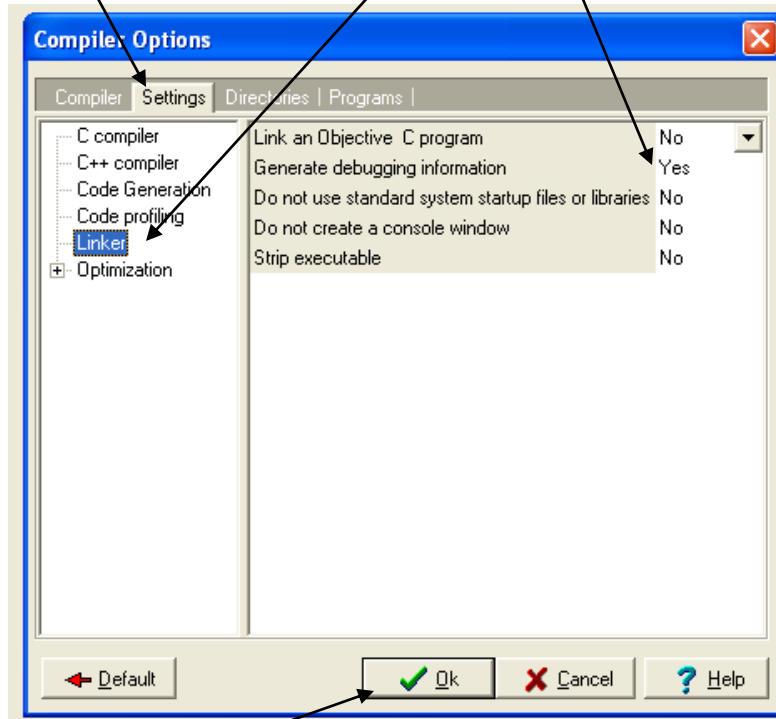

CHECK "Add the following commands when calling compiler" **AND** enter "-Wall" in the text box below

UNCHECK "Makefile generation: Use fast but imperfect dependency generation" then click **OK**

(This solves a problem where parts of a complicated project are not updated when recompiling)

SELECT "Settings", then **SELECT** "Linker", then **SELECT** "Yes" – Generate debugging information

Finally click **OK** to save the settings
