Unit Name	BACT - Business Assessment and Testing Services
What improvements have been planned implemented	The change over from paper pencil to computer GED Testing is in progress. Contracts to administer the exam by computer have been signed and sent to Pearson VUE, the Testing Company that has been contracted by the State of Texas to administer the GED Exam. Earlier it was hard to determine how quickly the process would go to get iBT up and running. Students have been informed
How did you decide that these improvements would benefit your unit or what weakness is the unit trying to improve	The loss of our Computer Support Lab Technician has caused a problem in the transition to computer testing. The Technician was an important part of the process. However, a new Technician was hired if he accepts the job progress will resume.
Description of what measures are going to be used to determine if the improvements were successful	Pass rate of Paper Pencil GED Testing vs. pass rate of computerized GED Testing
baseline data used to determine improvements were needed	Review if the center has the correct number of computers need to make the change over work and the waiting period required to get student tested and the computer support down time.
target goal data that shows your improvements have achieved your goals	Target goal is to have the right number of computer on site and to have little to no wait time. In addition to the wait for computer support if needed.
current data where you are currently in reaching your target	The pass rate for the past year for GED was 75%, so this figure will need to be compared to next year's computer exam to determine how the new system is working for our students.
Narrative	The change over to computerized GED Testing allows student to test faster, receive scores sooner, should use less staff to administer and should have a higher pass rate. This will be an on going measurement during the 2014 test year. We will continue to watch the change over until January 1, 2014, at which time
Unit Review Leader	Michiel D. Davis
